

List of Pokémon

The <u>Pokémon franchise</u> features 1,025 fictional species of collectible creatures, each with unique designs, skills, and powers. Conceived by <u>Satoshi Tajiri</u> in early 1989, Pokémon (or Pocket Monsters) are fictional creatures that inhabit the fictional Pokémon World. The designs for the multitude of species can draw inspiration from anything, such as <u>animals</u>, <u>plants</u>, and <u>legendary creatures</u>. Many Pokémon are capable of <u>evolving</u> into more powerful species, while others can undergo form changes and achieve similar results. Originally, only a handful of artists, led by <u>Ken Sugimori</u> designed Pokémon. However, by 2013 a team of 20 artists worked together to create new species designs. Sugimori and Hironobu Yoshida lead the team and determine the final designs.

The vast array of creatures is commonly divided into "generations", with each division primarily encompassing new titles in the main video game series and often a change of handheld platform. Generation I with 151 Pokémon refers to *Red, Blue,* and *Yellow;* generation II with 100 Pokémon refers to *Gold, Silver,* and *Crystal;* generation III with 135 Pokémon refers to *Ruby, Sapphire, FireRed, LeafGreen,* and *Emerald;* generation IV with 107 Pokémon refers to *Diamond, Pearl, Platinum, HeartGold,* and *SoulSilver;* generation V with 156 Pokémon refers to *Black, White, Black 2,* and *White 2;* generation VI with 72 Pokémon refers to *X, Y,*

The first 150 Pokémon as they appear in <u>Pokémon Stadium</u>, starting with <u>Bulbasaur</u> in the top left corner and ending with Mewtwo in the bottom right corner

Omega Ruby, and Alpha Sapphire; generation VII with 88 Pokémon refers to Sun, Moon, Ultra Sun, Ultra Moon, Let's Go, Pikachu!, and Let's Go, Eevee!; generation VIII with 96 Pokémon refers to Sword, Shield, Brilliant Diamond, Shining Pearl, and Legends: Arceus; and generation IX with 120 Pokémon refers to Scarlet, Violet, and Legends: Z-A.

Due to the large number of Pokémon, a listing of each species is divided into articles by generation. The 1025 Pokémon are organized by their number in the National Pokédex—an electronic encyclopedia that provides various information on Pokémon. The National Pokédex is subdivided into regional Pokédex series, each revolving around species introduced at the time of their respective generations along with older generations. For example, the Johto Pokédex, generation II, covers the 100 species introduced in *Gold* and *Silver* in addition to the original 151 species. The encyclopedias follow a general ordering: first partner Pokémon^[1] are listed first, followed by species obtainable early in the respective games, and are concluded with Legendary and Mythical Pokémon. Generation V is the sole exception, as Victini is the first Pokémon in the Unova Pokédex.

Concept

Satoshi Tajiri—who later founded Game Freak—conceived the premise of $Pok\acute{e}mon$ in general in 1989, when the Game Boy was released. The creatures that inhabit the world of $Pok\acute{e}mon$ are also called Pokémon. The word "Pokémon" is a romanized contraction of the Japanese brand Pocket Monsters (ポケットモンスター, $Poketto Monsut\bar{a}$). The concept of the Pokémon universe, in both the video games and the general fictional world of Pokémon, stems most notably from Tajiri's childhood hobby of insect collecting. Other influences on the concept include Ultraman, anime, and playing video games in general. Throughout his early life, Tajiri saw his rural, nature-filled hometown (Machida, Tokyo) transform into an urban centre. The urbanization of his town drove away wildlife, and he and others living in the area were eventually unable to collect insects. Through Pokémon, Tajiri sought to bring back this outdoor pastime and share it with the world. The first games in the franchise, Red and Green, were released on 27 February 1996 in Japan for the Game Boy. The games were internationally released as Red and Blue in September 1998. The ability to capture, battle, trade, and care for numerous creatures catapulted Pokémon to international popularity, and it has become a multibillion-dollar franchise and the second-best selling video game series after the Mario franchise.

At the start of a main series Pokémon game, the player character receives one of three Pokémon to become their first partner, [a] with which they can battle and catch other Pokémon. Each Pokémon has one or two "types", such as Fire, Water, or Grass. In battle, certain types are strong against other types. For example, a Fire-type attack will do more damage to a Grass-type Pokémon, rather than a Water-type attack. [7] This form of gameplay is frequently compared to that of rock-paper-scissors, though players have to strategize which Pokémon and which of their attacks to use against various opponents. [8][9]

Many species of Pokémon can <u>evolve</u> into a larger and more powerful creature. The change is accompanied by <u>stat changes</u>—generally a modest increase—and access to a wider variety of attacks. There are multiple ways to trigger an evolution, including reaching a particular level, using a special stone, or learning a specific attack. For example, at level 16, <u>Bulbasaur</u> can evolve into <u>Ivysaur</u>. Most notably, the Normal-type <u>Eevee</u> can evolve into eight different Pokémon: <u>Jolteon</u> (Electric), <u>Flareon</u> (Fire), <u>Vaporeon</u> (Water), <u>Umbreon</u> (Dark), <u>Espeon</u> (Psychic), <u>Leafeon</u> (Grass), <u>Glaceon</u> (Ice), and <u>Sylveon</u> (Fairy). In generation VI, the games introduced a new mechanic called <u>Mega Evolution</u>, as well as a subset of Mega Evolution called <u>Primal Reversion</u>. Unlike normal evolution, Mega Evolution and Primal Reversion last only for the duration of a battle, with the Pokémon reverting to its normal form at the end; as of the release of <u>Scarlet</u> and <u>Violet</u>, 48 Pokémon can undergo Mega Evolution or Primal Reversion. In contrast, some species such as <u>Castform</u>, <u>Rotom</u>, <u>Unown</u>, and <u>Lycanroc</u> undergo form changes, which may provide stat buffs or changes and type alterations but are not considered new species. Some Pokémon have <u>differences in appearance due to gender</u>. Pokémon can be <u>male</u> or <u>female</u>, male-only, female-only, or of an unknown gender.

The *Pokémon* franchise is primarily intended for younger players. However, each Pokémon has various complex attributes such as natures, characteristic traits, Individual Values (IVs) and Effort Values (EVs). These are intended for people "who enjoy battling and want to go more in depth", according to Game Freak Board Director <u>Junichi Masuda</u>. These individual statistics were also included, because the basic concept of the franchise is to train one's Pokémon. Designer Takeshi Kawachimaru stated that IVs and EVs "help to make each Pokémon in the game individual", as it adds unique aspects to them. [11] Each *Pokémon* game introduces a few "Legendary" and "Mythical" Pokémon that are powerful, rare, and hard to catch. [12] *Pokémon Sun* and *Moon* introduced "Ultra Beasts", which are described as "beings from another dimension" that appeared in the Alola region, and are similarly powerful and rare. [13]

Design and development

Throughout development of *Red* and *Green*, all Pokémon were designed by <u>Ken Sugimori</u> who was a long-time friend of Tajiri, and a team of fewer than ten people, [15] including <u>Atsuko Nishida</u> who is credited as the designer of <u>Pikachu</u>, [16][17] By 2013, a team of 20 artists worked together to create new species designs. A committee of five people determine which designs are incorporated into the games, with Sugimori and <u>Hironobu Yoshida</u> finalizing the look of each creature. Sugimori is also responsible for the "Box Art" Legendary Pokémon and all of the official artwork for the games. According to Yoshida, the number of rejected Pokémon designs is five to ten times more than the number that are finalized in each game. In rare cases, rejected designs are brought back and released in a later generation. Shigeru Ohmori, director of *Sun* and *Moon*, admitted that creating new Pokémon has become a difficult task with the sheer number of creatures designed over the franchise's 20-year history. Each iteration of the series has brought both praise and criticism over the numerous creatures.

The designs for Pokémon are often highly analogous to real-life creatures but also encompass inanimate objects. [22] Director Junichi Masuda and graphic designer Takao Unno have stated that inspiration for Pokémon designs can come from anything. The variety of animals and culture around the world provide the basis for having countless ideas incorporated into the franchise. [23] The environment that a Pokémon would live in is taken into account when they are designed. [24] The lei-like Comfey fits appropriately in the Hawaii-inspired Alola region of Sun and Moon. [21] Masuda has stated that each element of a design has a functioning reason. [24] In some cases, the design team creates a footprint that a Pokémon could make and designs a creature around that [25] Some designers look to game mechanics for inspiration and see where particular typing combinations could be interesting. [21] Typing assignment varies during the design process; sometimes

The evolution mechanic is most prominently displayed through $\underline{\text{Eevee}}$ (center) and its eight evolutions. Each one requires a different method to evolve $\underline{^{[14]}}$

a Pokémon receives a type after it is created and other times they are designed around a particular type. [26] Each Pokémon has a specific height and weight. [27]

The simpler roots of designs in generation I prompted greater complexity in later games. [22] Designs in general have become increasingly complex and thematic in newer games. [19] Sneasel, for example, draws inspiration from the Japanese yōkai kamaitachi, mythical creatures with fast, razor-sharp claws that hunt in packs. These elements are all found in Sneasel's design and characteristics. [28] New Pokémon introduced in generation VI, for example, are heavily influenced by the culture and $\underline{\text{fauna}}$ of Europe (namely $\underline{\text{France}}$). However, by the release of X and Y in 2013, Sugimori stated that he wishes for Pokémon design to return to the simpler roots of the franchise. [29]

Masuda considers the first partner Pokémon among the most important in the franchise. Yoshida goes further and calls them "the face of that generation" and says that "they're the ones that should be on the packaging". The three Pokémon players start out with in each generation are always Grass-, Water-, and Fire-types, a trio that Masuda considers the easiest to understand for new players. Their designs are based on recognizable animals and made to stand out from pre-existing Pokémon. Each are also given distinct personalities to further define them. In an interview with *GamesRadar* in 2009, Masuda stated that simple Pokémon take around six months to design and develop, and that Pokémon that play a more important part in the games may take over a year. Masuda added, "We also want the designer to have as much freedom as possible; we don't want to narrow their imagination by saying, 'We want this kind of Pokemon.' When we talk to the designer we always stress that they shouldn't think of Pokemon necessarily, but should instead just be as creative as they can." After the Pokémon is designed, it is sent to the "Battle Producer", who decides which moves and stats the Pokémon should have.

List of species

Pokémon species glossary

		Key
Color / Letter	Meaning	Description
s	Starter Pokémon (known officially as First Partner Pokémon) ^[a]	The first Pokémon a player is able to obtain in the main-line games.
F	Fossil Pokémon ^[35]	Ancient Pokémon only obtained by resurrecting fossils and their evolutions.
В	Baby Pokémon ^[36]	Infant Pokémon primarily obtained by breeding their evolved forms.
L	Legendary Pokémon	Powerful Pokémon associated with the legends and lore of the Pokémon world.
М	Mythical Pokémon	Pokémon only obtainable through rare circumstances, such as distribution events. [f]
U	Ultra Beast	Certain Pokémon from another dimension.
P	Paradox Pokémon	Pokémon resembling ancient or futuristic relatives of a modern-day Pokémon.

Glitch species

In the Game Boy *Pokémon* games, *Pokémon Red*, *Green*, *Blue*, and *Yellow*, players were able to access a set of 105 glitch Pokémon. These species were not designed by the games' designers but could be encountered via the use of several glitches. Among them is a glitch dubbed MissingNo., which became highly notorious. [47]

Notes

- a. Official promotional sources have preferred the use of first partner or first partner Pokémon since at least 2019. $^{[1]}$
- b. The Generation I and II main series games were later re-released via the Nintendo 3DS eShop in 2016–2018, with the Generation I titles being in celebration of the franchise's 20th anniversary.
- c. Two Pokémon, Meltan and Melmetal, were introduced in a 2018 update to the spin-off game <u>Pokémon Go</u>. Let's Go, <u>Pikachu!</u> and <u>Let</u>'s Go, <u>Eevee!</u> include Meltan and Melmetal as playable Pokémon only through being transferred over from <u>Pokémon Go</u>. [31]
- d. Hisui was the ancient name for the region of Sinnoh
- e. Two Paradox Pokémon, Walking Wake and Iron Leaves, were added post-release in an online event starting 27 February 2023. [32]
- f. Certain mythical Pokémon are permanently obtainable in-game, being Deoxys in *Omega Ruby* and *Alpha Sapphire*, [37] Magearna in <u>Sun</u>, <u>Moon</u>, <u>Ultra Sun</u> and <u>Ultra Moon</u>, [38] Celebi in the <u>Virtual Console</u> version of <u>Crystal</u>, [39] Keldeo in <u>Sword</u> and <u>Shield's The Crown Tundra</u> expansion, [40] Mew, Jirachi, Darkrai and Arceus in <u>Brilliant Diamond</u> and <u>Shining Pearl</u>, [41](42) Manaphy, Phione, Shaymin, Darkrai and Arceus in <u>Legends</u>: Arceus, [43] and Meloetta in <u>Scarlet</u> and <u>Violet's The Indigo Disk</u> expansion. [44]
- g. <u>Legends: Arceus</u> has no breeding mechanic. [46] Consequently Pichu, Cleffa, Togepi, Elekid, Magby, Budew, Chingling, Bonsly, Mime Jr., Happiny, Munchlax, Riolu, and Mantyke can only be found in the wild in that game.
- h. Although Cranidos, Rampardos, Shieldon and Bastiodon are Fossil Pokémon, they are obtainable in the wild in Legends: Arceus. [43]
